Special Information:

These pumps were special "service" pumps supplied to International Harvester. The pumps were converted by International Harvester for specific applications by the addition of a stop plate, Bowden Wire, Electric Shut-off, etc. To determine the required service parts and calibration data, proceed as follows:

1. Note International Harvester part number stamped on pump nameplate.
2. Refer to "Cross Reference" list (International Harvester to United Technologies Diesel Systems) to determine the equivalent United Technologies Diesel Systems pump type designation (Example: 674-700 C91 cross references to United Technologies Diesel Systems type designation 100 6A 100A 9220 Code 3).
3. Use the service parts and calibration data for the pump that has been cross referenced.

NOTE: Should the International Harvester part number cross reference more than one United Technologies Diesel Systems type designation (Example: 674 285 C91 cross references 100 6A 100A 9237 Code 1 and 9287 Code 4), utilize the service data for the pump with the highest number (9287 Code 4 in our example).
