

WIRING HARNESS CONNECTIONS

CB 6713A

CB 6713A is a prewired magnetic pickup harness. It is suitable for use with MP 677 and MP 678 magnetic pickups.

1. Install the prewired mating electrical connector to the engine installed magnetic pickup. The wiring harness connector slot matches the mating half of the electric actuator connector keyway.

EG 192

2. The cable should be routed back to the governor system speed control unit in such a manner to avoid extreme engine heat or possible cable damage. The overall length of CB 6713A is 120 inches.
3. After the wiring harness is routed, the insulation of the cable and internal leads must be stripped and connections may be made to the respective governor system speed control unit terminals as follows:

Cable Wires	"C"	Speed Control Unit Connections (Series)
